QUALITY DESIGNATION

ANALYTICAL REAGENT (AR)

These reagents are of high purity and are useful for analytical and research purpose. The guarantee certificate gives the minimum assay and maximum limits of trace impurities. This is also marketed by other International companies as Analar, P.A. - (Proanalysis), AR-Analytical Reagent Puriss

SYNTHESIS

General purpose reagent used in many potential applications in chemical laboratories. Careful control ensures that a consistently high defined quality is maintained throughout.

LABORATORY REAGENTS (LR)

These are used in many chemical laboratories and are sub categorized as pure, extra pure, purified organic and inorganic, commercial products.

EXTRA PURE, PURIFIED, PURE

Products suitable for qualitative and semi-quantitative work. Most of our "extra pure: products comply with "Pharma Copoeia" grades of all countries and preferentially used in the Pharmaceutical industries.

MICROSCOPY (M.S.):

Highly purified reagent for use in biochemical research and analysis. They are free from inhibitors such as traces of heavy metals and tested with a view for biochemical work.

HPLC GRADE

Continuing advances in the use of HPLC have lead to an increased demand for solvents and reagents in wider range of application areas, particularly for bimolecular and ion separation. Key parameters such as UV absorbance, transmittance, non-volatile matter, moisture content, fluorescence impurities and assay are very carefully controlled.

SPECTROSCOPY GRADE

These are solvents of high optical purity for UV/Visible/IR/fluorescence/NMR and Mass spectroscopy. The guarantee certificate includes assay, minimum transmission at certain defined wavelengths in UV range, moisture content, non-volatile matter etc.

ION PAIR CHROMATOGRAPHY

Highly pure additives for ion pair chromatography are suitable for detection in the low UV range. Reagents of this special quality inspected by means of a filter test, a cyclovoltogram and gradient test at 205 nm

DIAGNOSTIC REAGENT

Various hospitals, clinical and pathological laboratories uses specially produced these reagents for diagnostic purpose.

BIOLOGICAL STAINS

These chemicals are ready to use solutions for microbiology, histology, hematology and cytology, stringent testing on all batches is performed to ensure all specification are satisfied.

MICROBIOLOGY

A broad range of culture media bases, additives, stains and indicators for use in detection, growth and identification of microorganisms.

PESTICIDE RESIDUE TRACE ANALYSIS SOLVENTS:

The range of high purity solvents are specifically designed for the analysis of pesticide residues in the food industry and in the environmental control, for example in drinking water. These solvents are carefully controlled by gas chromatography. The analysis is made over a sample 500 fold concentrated. Then the sample is injected in the gas chromatography using the ECD detector.

BIOCHEMICALS

These highly purified reagents are used in biochemical research and analysis. They are free from inhibitors such as trace of heavy metals and tested with a view of biochemical works. Our range includes alkaloids, amino acids, buffers, carbohydrate, enzymes, enzyme substrates, nucleotides and derivatives etc.

SINGLE ELEMENT STANDARD SOLUTIONS FOR AAS, ICP;

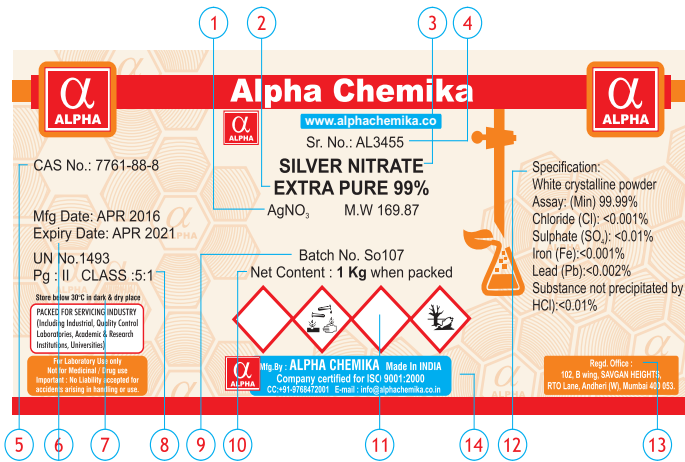

We have introduced ready for use Single Element Standard Solutions for trace metal analysis in AAS & ICP and AAS standard solutions supply by us have following features:

Each element solutions are traceable to NIST

Manufactured from the high purity D.I. Water, metal free acids and high purity metal and metal salt. Manufactured in intensively controlled clean-room, for prevention of cross-contaminations.

High quality, economic prices beyond the other manufacturers.
